

Item description/product images

Description

Material:

Sleeve and spring plastic

Thrust pin steel, stainless steel or POM

Version:

Thrust pin (steel) case-hardened and black oxidised.

Thrust pin (stainless steel) bright

Thrust pin (POM) white.

Note:

Lateral spring plungers are used for positioning, holding and fastening workpieces in applications where there is increased presence of dirt.

For example: painting and sandblasting.

Calculation dimension X:

$Y > = L1 - D1/2$, therefore $X = D1/2 - S$

$Y < L1 - D1/2$, therefore $X = D1/2 - S - ((L1 - D1/2 - Y) * 0,123)$

Light spring force = blue spring

Standard spring force = red spring

Strong spring force = green spring

Assembly:

The sleeve is pressed into the hole.

It is recommended to moisten the sleeve before assembly.

Drawing reference:

1) Assembly tool

2) Some sizes have a different pin form

Y = workpiece height

W = workpiece length

X = coordinate dimension

Z = stop diameter

Drawings
