

Item description/product images

Description

Material:

Clamping angle die-cast zinc.
Cam lever cast aluminium.
Body steel.

Version:

Cam lever, black powder-coated.
Metal parts, black oxidised.
Slot key, electro zinc-plated.

Note:

The clamping angles are used for connecting two profiles of the same series that have contact on the side faces and cross at any angle.

Loosening the screw releases both clamps allowing free rotation and sliding along the slots.

The clamping angles are generally used in pairs or in combination with a joint angle.
