

## Item description/product images

for electrics

## Description

**Product description:**

In addition to their mechanical function as an indexing and positioning element, spring plungers with status sensor are used to detect whether a component is in the desired position or not.

The sensor recognises whether the thrust pin is retracted or extended and enables this status information to be electronically processed.

**Material:**

Sleeve, thrust pin and spring, steel.

Status sensor stainless steel.

**Version:**

Black oxidised.

Thrust pin hardened.

**Note:**

The status sensor activates at a travel of H.

**Technical data:**

Inductive sensor:

Output relay: PNP normally open (NO) or normally closed (NC)

Operating voltage: 10 – 30 V DC

Operating current: <200 mA

Switch gap: 0.8 mm

Switching frequency: 2000 Hz

Short-circuit proof: yes

Reverse polarity protected: yes

IP rating: IP 67

Connection type: 2 m PVC cable

Approval: CE

**Application:**

Spring plungers with status sensor enable status-dependent process control. It can be ensured that a workpiece or moving component is in the desired location.

**Temperature range:**

Temperature range: -25 °C to +70 °C

**Safety:**

spring plunger with status sensor are not suitable for safeguarding persons.

**Drawing reference:**

4) LED-indicator

BN = brown

BK = black

BU = blue

Example of position feedback:

Pos. 1: slide engaged

Pos. 2: slide disengaged

3) Slide
